Summary

Third-year Electronics and Communication Engineering student at BMSIT&M, Bengaluru, focused on embedded systems, IoT, cloud applications, and practical product development. Building end-to-end hardware and software projects involving ESP32, custom PCBs, cloud storage, authentication, and modern web technologies. Founder of Dexit, a client website agency generating variable monthly revenue of Rs. 60,000-80,000.

Education

BMS Institute of Technology and Management, Bengaluru
B.E. in Electronics and Communication Engineering | Third Year

Technical Skills

Programming: C, C++, Java, JavaScript, TypeScript, SQL

Embedded & IoT: Microcontrollers, Embedded Systems, FreeRTOS, Sensors, Wireless Communication, Custom PCB Development

Frontend & Web: React, Vite, HTML, Tailwind CSS, Responsive Web Design

Backend & Cloud: Supabase, Cloudflare, PostgreSQL, Authentication, Storage, REST APIs, Vercel

Projects

Airote V1 - ESP32-S3 Air Mouse

Embedded Systems, IoT, Custom PCB | Ongoing

- Designing an end-to-end air mouse product using the ESP32-S3 microcontroller.
- Developing a custom PCB to integrate motion sensing, wireless communication, power management, and user-input components.
- Working across hardware design, embedded firmware, device interaction, testing, and product-level integration.
- Focusing on creating a reliable and practical device rather than only a prototype.

8bitSpace - Pixel-Themed Cloud Storage Application

[GitHub Repository](#) | [Live Demo](#)

- Built a cloud-based file manager using React, Vite, and Supabase.
- Implemented email/password authentication, private user folders, file uploads, starred items, trash, restore, and activity history.
- Used private cloud storage with expiring signed URLs to protect user files.
- Implemented database-level access control using Row-Level Security policies.
- Developed a responsive desktop and mobile interface with a distinctive pixel-themed design.

Experience

Dexit - Founder & Website Developer

Bengaluru | Ongoing

- Founded and operate a client website agency focused on designing, developing, and delivering websites for businesses.
- Manage the complete client workflow, including outreach, requirement gathering, UI development, deployment, and delivery.
- Generate variable monthly revenue of approximately Rs. 60,000-80,000 through client projects.
- Build responsive, production-ready websites using modern frontend tools and AI-assisted development workflows.
- Handle client communication, project scoping, revisions, deployment, and ongoing improvements.

Areas of Interest

Embedded Systems | IoT Product Development | Cloud Computing | Full-Stack Development | Hardware-Software Integration | Automation
